The Authority for Biological and Biomedical Models – The Hebrew University

Murine Health Monitoring Program - SOPF Unit

General description:

All rodents maintained in the SOPF unit are housed in IVC cages. Most of the rodents are introduced into the SOPF unit only by embryo transfer (rederivation). Exception is made for rodents arriving from known commercial vendors with SOPF barriers. These are allowed to enter our facility only after approval of the health report and after a quarantine period including a complete health monitoring PCR test panel is performed during this period.

Unit entrance is restricted, Researchers are not allowed to enter this unit. Only dedicated animal care takers enter the unit.

Personnel wear dedicated clothing on entering the animal facility: lab coat, shoe covers, face mask, head cover and gloves.

Cages are changed inside type II biological hoods.

Equipment and bedding are sterilized by autoclave or H₂O₂ before introduced into the SOPF unit.

Diet is irradiated. Drinking water is filtered and acidified to pH- 2.8 – 3.2.

Health monitoring program is based on FELASA recommendations. Each rodent room in the unit is assigned with sentinel female mice (Athymic Nude-Foxn1-nu/+ Heterozygote). Sentinels in each room are exposed to bedding from different cages from the room at each cage change. Each sentinel cage samples 100-120 cages.

Sentinels are tested twice quarterly for infections of opportunistic pathogens, as follows:

Parasitology (endoparasites and ectoparasites):

Performed twice quarterly.

Bacteriology (respiratory and digestive tract):

Respiratory and intestinal tract culture performed quarterly.

Serology:

There are several panels being performed throughout the year:

- **Mice:**

- Semiannually- clinical panel:**

MHV, EDIM, MPV, MVM, GDVII

- Annually - comprehensive panel:**

MHV, EDIM, MPV, MVM, GDVII, Myc. pulmonis, PVM, Sendai, LCMV, Polyoma, Reo-3, MAD 1, MAD 2, CAR Bacillus, Tyzzer's agent, MCMV, Ectromelia, MNV, MKPV.

- **Rats:**

- Semiannually- clinical panel:**

PVM, Myc. pulmonis, RPV, RMV, SDAV/RCV, KRV, H-1, RTV, Tyzzer's agent.

- Annually - comprehensive panel:**

All the above + Sendai, CAR Bacillus, Hanta, MAD 1, MAD 2, ECUN, Reo-3.

Gross Pathology:

Performed twice quarterly.

Histopathology:

Performed in case of abnormal gross pathological findings

PCR:

- SOPF rooms - SOPF Panel performed semiannually

Pneumocystis spp., Helicobacter spp., Corynebacterium bovis, MKPV, MNV, Fur mites, Pinworms, Spiroplasma muris

Animals introduced by embryo transfer, and animals received to quarantine from known commercial vendors (as described previously) will go through a complete health monitoring tests including (SOPF PCR Panel, bacteriology and parasitology) before admitted into the breeding unit.
