The Authority for Biological and Biomedical Models – The Hebrew University

Murine Health Monitoring Program - SPF Units

General description:

All rodents maintained in one of the SPF units are housed in filter top cages or IVC. Rodents are introduced into the SPF units only from known commercial vendors. Rodents from non-commercial vendors are going through health monitoring screening in quarantine prior to being introduced into the SPF unit.

Personnel and researchers wear dedicated clothing on entering the animal facility: lab coat, shoe covers and gloves.

Cages are changed inside type II biological hoods.

Equipment and bedding are sterilized by autoclave before introduced into the SPF unit.

Diet is irradiated. Drinking water is filtered and acidified to pH- 2.8 – 3.2.

Health monitoring program is based on FELASA recommendations. Each rodent room in the facility is assigned with sentinel mice (ICR) or rats (SD).

Sentinels in each room are exposed to bedding from different cages from the room at each cage change. Each Sentinels cage samples 100-120 cages.

Sentinels are tested on a monthly and quarterly basis for subclinical infections of pathogens, as follows:

Parasitology (endoparasites and ectoparasites):

Performed twice quarterly.

Bacteriology (respiratory and digestive tract):

Respiratory and intestinal tract culture performed quarterly.

Serology:

There are several panels being performed throughout the year:

• **Mice:**

Clinical panel performed semiannually

MHV, EDIM, MPV, MVM, GDVII

Comprehensive panel performed annually

MHV, EDIM, MPV, MVM, GDVII, Myc. pulmonis, PVM, Sendai, LCMV, Polyoma, Reo-3, MAD 1, MAD 2, CAR Bacillus, Tyzzer's agent, MCMV, Ectromelia, MNV, MKPV

• **Rats:**

Clinical panel performed semiannually

PVM, Myc. pulmonis, RPV, RMV, SDAV/RCV, KRV, H-1, RTV, Tyzzer's agent.

Comprehensive panel performed annually

All the above + Sendai, CAR Bacillus, Hanta, MAD 1, MAD 2, ECUN, Reo-3.

Gross Pathology:

Performed twice quarterly.

Histopathology:

Performed in case of abnormal gross pathological findings

PCR:

• SPF rooms - Helicobacter spp. performed annually

• SOPF rooms - SOPF Panel performed semiannually

Pneumocystis spp., Helicobacter spp., Corynebacterium bovis, MKPV, MNV, Fur mites, Pinworms, Spirochete muris

Report Notes:

- a. Data is expressed as number positive/number tested
b. Historical results include 18 months cumulative data

** The last detection of MNV was on June 2025. Following this, PCR testing for MNV was conducted on all researchers' cages housed in the room, and all results were negative.
